**Slim and Lightweight**

Slim type design, Super high brightness, Ultra high definition, HD performance, Different pixel pitches available: from 2mm to 5mm

**Aerodynamic**

Stable and reduces wind resistance and noise

**Power-efficient**

High refresh rate driver IC and precise power technology allow to consume less energy by powering different diodes with differentiated voltage

**Auto-brightness**

Auto-brightness and intelligent dimming technology, the screen's brightness adjustable automatically

**Roof rack of all sizes**

Roof rack of different sizes makes the led display compatible with any car roof. It is also easy to take the led display away without any damage done to your car.

**Geo-targeting and smarter system**

GPS module is incorporated into the led displays which allows for geo-fencing

**Advertisements Cloud Management System**

Allows for the control of multiple screens from a single location

**Over-voltage protection**

Ensuring the sign remains safe and in proper working order

**Weatherproof**

IP65

High resistance against vibration and shock makes withstand daily usage on bumpy roads without screen problems

**Intelligent Control**

Can be accessed by multiple interfaces including USB or wireless network connections such as WIFI and 3G/4G. Web-based/android/iOS APP control. Manage in real time.
